Executive Summary

Background and Purpose
AnMed Health, located in Anderson County, South Carolina, is the leading health care provider serving the health care needs of those in the Anderson County area. With a mission to passionately blend the art of caring with the science of medicine to optimize the health of our patients, staff and community, AnMed Health is dedicated to improving the health of the community and providing gold-standard quality care.

In the Spring of 2012, AnMed Health began the implementation of a Community Health Needs Assessment (CHNA) for Anderson County. The effort focused on assessing community health needs, local health resources, barriers to care, gaps in services, and trends regarding health and healthy lifestyles. The resulting CHNA will be utilized to document community need and link those needs to community benefit efforts of the health system. The needs assessment will be utilized to assist the hospital in planning and prioritizing its community benefit investments.

Summary of Findings
More detail on data and findings is included in the full report in the General State of Our Community’s Health section.

Identified Health Priorities

A variety of data and information was collected and analyzed in order to identify key priority health needs of the community. The prioritization process included review and analysis of:

1) secondary, quantitative statistical data,
2) primary, qualitative community feedback, and
3) current community and AnMed Health-specific assets.

In addition to review of the above, additional meetings with stakeholders were facilitated to identify priorities and potential actions. To select priorities and related strategies, the following criteria were considered:

- Data and community feedback indicated the issue as an important community need
- AnMed Health has the capacity to impact the issue
- Addressing a selected issue holds the potential to affect other key health conditions, therefore creating a multiplying effect
- Strategies selected align with and support AnMed Health’s mission and strategic direction
- Strategies selected take in consideration current assets in both the community and within AnMed Health

In considering the above, the following priorities were selected:

1. Obesity
   Over 65% of the population is either overweight or obese. That number has continued to grow over the past several decades. Childhood obesity is growing at an alarming rate. Addressing obesity has the potential to positively affect leading health issues in the community – heart disease (which is the County’s 2nd leading cause of death), stroke, hypertension, and diabetes.

2. Access to Primary Health Care
   Anderson County is designated as a low-income Health Provider Shortage Area (HPSA) for medical care. Hospital data shows ER usage rates have increased by approximately 40% from 2004 – 2011. Focus groups reported access to primary care as a major concern. The most frequently reported issues with access to care were: finding a provider that takes Medicaid, getting an appointment in a timely manner, high out-of-pocket costs, and lack of a medical home.

3. Access to Behavioral and Mental Health Services
   Anderson County is designated as a low-income Health Provider Shortage Area (HPSA) for mental health care. The community focus groups repeatedly reported that behavioral and mental health services are a growing need, yet very little mental and behavioral health services are available. There was particular concern regarding lack of mental and behavioral health services for children.

4. Cancer
   Cancer is the leading cause of death in both adults and children (age 0-14) in Anderson County. Anderson still has a higher cancer death rate and higher cancer incidence rate than SC or US. Lung and colorectal
cancers are of particular concern. Recent data has, however, shown improvement in Anderson. The National Cancer Institute data set from 2004-2008 reported Anderson County as a priority level 1. A new release was issued July 2012 indicating that incidence rates and death rates from all cancers have dropped slightly in Anderson, prompting the National Cancer Institute to move Anderson from Priority 1 to Priority 4 (priority level 1 indicated that the death rate was both above the state and national rate, and also that the rate is rising. Priority 4 indicates that death rates are stable and no longer rising, but still above state and national rates.)

5. Asthma in Children
The prevalence of asthma has increased nationally since the 1980s. Asthma is the second most common chronic condition seen in emergency departments in Anderson, and the 10th most common chronic condition seen during inpatient stays. Children are disproportionately affected by asthma. The prevalence of asthma is highest in those under 18, and it is the most common chronic disease and a leading cause of disability in children.

6. Accident Prevention for Children
Accidents is the second (after malignant neoplasms) leading cause of death in children under age 18. For the 0-17 population Anderson County has a higher death rate from injury than the state, 35.2 per 10,000 for Anderson compared to 21.7 per 10,000 for the state. For non-fatal injuries, Anderson County has a rate of 928.6 per 10,000 for ages 0-17, which is lower than the state rate of 978.4 per 10,000. Motor vehicle accidents are the leading cause of injury death for children 0-17.

Community assets related to these needs have been identified in the Identified Priority Health Needs & Related Assets section of this report (starting on page 39).

Strategic initiatives to address each of these identified needs have been developed and are included in the AnMed Health Medical Center & AnMed Health Women’s and Children’s Hospital Community Health Needs Assessment –Implementation Strategy document. This will be reported annually to the IRS on Form 990.

This CHNA report will be made widely available to the public and will be posted on AnMed Health’s website: www.anmedhealth.org.
About the Research

Conducted by an independent consulting firm, a community-based approach was taken to complete the community health needs assessment. National, state, regional and county-specific data was collected from a broad set of data sources. Special emphasis was placed on assessing Healthy People 2020 Leading Indicators, medically underserved areas and gathering information from community residents, providers of health and human services, and other stakeholders and representatives of Anderson County.

Efforts were made to ensure that the research was conducted in a manner that was representative of the communities within AnMed Health’s primary service area. The primary service area and focus of the CHNA is Anderson County as approximately 90% of AnMed Health’s Medical Center and Women’s and Children’s Hospital’s inpatient, outpatient and emergency room discharges were from residents of Anderson County.

Research methods were conducted in approach that incorporated both quantifiable and qualitative data to get a well-rounded view of the state of the community’s health.

1) Collection of statistical (secondary, quantitative) data at national, state, regional and local levels – key data sources included Healthy People 2020, County Health Rankings, National Health Indicators Warehouse, CDC and South Carolina DHEC biostatistics, hospital discharge data. Dates of data collected ranged from 2000 – 2011. For each indicator, data was pulled for the most recent year available. In addition, data was pulled, when available, from previous years in order to assess progress. A more detailed list of data sources is included in the appendix of this report.

2) Collection of qualitative data through a variety of community and stakeholder focus groups.

The assessment was completed in partnership and with much input from the local public health professionals, health and human service agencies and AnMed Health leaders and board.
Community Served - Anderson County

The geographic service area and focus of the AnMed Health CHNA is Anderson County as approximately 90% of AnMed Health’s Medical Center and Women’s and Children’s Hospital’s inpatient, outpatient and emergency room discharges were from those who reside in Anderson County.

Population Growth
Since 2000, the population in South Carolina has increased by 15.3%. Anderson County has experienced a slightly slower growth rate of 12.9%.

**Anderson County**
- Population = 187,126
  - Approximately 45,000 of the population is under the age of 18
  - Growth Rate 2000-2010 = 12.9%

**South Carolina**
- Population = 4,625,364
  - Growth Rate 2000-2010 = 15.3%

Race
Anderson County has less racial diversity than both the state and nation, particularly in Census-classified race categories such as Asian, American Indian, “some other race”, and “2 or more races”. The Anderson County Black population is 15.9% compared to 27.9% in South Carolina.

ANDERSON, SC

![Population Change Map](image)
Education
Educational attainment has improved over the past 10 years in the County. The current high school graduation rate is 77% in Anderson County, better than the 73% in the state of South Carolina. (source: US Census and SC Department of Education)

Income and Poverty
The median household and per capita income in Anderson County are lower than that of the state and nation.

- Median household income
  - $36,770 Anderson
  - $42,018 S.C.
  - $51,914 US
- Per Capita Income
  - $20,496 Anderson
  - $22,128 S.C.
  - $27,334 US

With the downturn in the economy over the past several years, poverty rates have climbed at an alarming rate and are much higher than the nation’s 13.8% poverty rate.

Unemployment

After a large spike in 2007 in unemployment, Anderson County, along with the nation is beginning to see signs of recovery. Currently Anderson County’s unemployment rate mirrors that of the nation and is better than most parts of the state.

Steady decline in unemployment over past 2 years
June 2010 11.1% (worse than state rate)
July 2011 10.5%
Nov. 2011 9.5%
Dec. 2011 8.8% (better than state)
March 2012 8.4%

source: S.C. Department of Employment & Workforce
General State of Our Community’s Health

Summary of Findings

General Social Characteristics
- Anderson County population has experienced positive, steady growth.
- Educational attainment is improving.
- Anderson County is a less diverse population than the state and nation.
- Median household income has remained stagnant over the past 10 years and is lower than the state and nation. Poverty rates have increased at an alarming rate.
- Unemployment is improving. Zip Codes with high unemployment rates include: 29626, 29684, 29697, and a small portion of 29621 in the city.

General Health Rankings
- Anderson County is healthier than most other parts of the state of South Carolina. It ranks 15th out of 46 counties among the health outcomes ratings (morbidity, mortality) and 11th among the health factors ratings (social, economic, environment, health behavior factors).

Healthy Lifestyles
- Smoking rates have improved both in adults and adolescents. Efforts such as Smoke-Free Anderson have made great strides in creating a culture that influences a decrease in smoking.
- Overweight and obese adults and children are a concern, as well as habits related to lack of exercise and healthy eating.
- Teen pregnancy rates have improved over the past 10 years. However, Anderson County’s rates remain significantly higher than the state and nation. Zip codes in which teen pregnancy is high includes: 29621, 29624, 29625, 29627, and 29697.
- Community Perceptions: Feedback from the community focus groups indicates that most people have a general knowledge of how lifestyle choices impact health; however most report that for reasons related to cost, access, and convenience it is difficult to consistently eat a healthy diet and get enough physical activity.

Health Environment
- Overall, Anderson County offers a health environment that is conducive to healthy lifestyles. From its natural resources that offer outdoor recreation, to its growing city and county recreation facilities and opportunities, to clean air, Anderson ranks high in the state when considering health environment.

Health Risk Factors
- Prevalence of diabetes continues to climb, and Anderson has a higher rate than both the state and nation.
- Infant mortality and preterm births have improved.
- Hypertension rates have improved.
- Community Perceptions: The community focus groups reported consistently that obesity and related disease (diabetes, hypertension, congestive heart failure) is the number one health problem in Anderson for adults and children.
Health Outcomes - Morbidity and Mortality

- Asthma is the second most common chronic condition seen in emergency departments in Anderson, and the 10th most common chronic condition seen during inpatient stays. Children are disproportionately affected by asthma.
- Cancer is the leading cause of death in adults. Lung and colorectal cancers are of particular concern. In Anderson County, total costs of hospitalizations due to cancer was $46 million in 2010.
- Diabetes prevalence and death rates are increasing.
- While heart disease is the second leading cause of death, death rates of both heart disease and stroke have seen a 10-year improvement trend.

Mental Health

- Some mental health indicators are showing improvement in Anderson; however, feedback from the community indicates that mental health services are increasingly hard to access, and that there is a growing need for mental health services for children.

Health Services

- Due to the lower-income status of the county, Anderson County is designated as a low-income Health Provider Shortage Area (HPSA) for both medical and mental health care.
- Some areas of the County have been designated as Medically Underserved Areas/Populations (MUA/P). These areas fall within zip codes 29626, 29627, 29684, 29689 and a cluster near the city encompass medically underserved areas.
- Anderson has improved and fares better than the state and nation in preventive clinical services such as cholesterol, colorectal and mammogram screenings as well as in flu and pneumococcal vaccines and childhood immunizations.
- While insurance coverage rates have improved, the community reports that access to care remains an issue, particularly for those covered by Medicaid.
- Hospital data shows ER usage rates have increased by approximately 40% from 2004 – 2011.
- Community Perceptions: Within focus groups:
  - The most frequently reported issues with access to care were: finding a provider that takes Medicaid, getting an appointment in a timely manner, high out of pocket costs, and lack of a medical home.
  - The community reported very little behavioral health services, particularly for children, are available.
  - The community reported widespread misuse of the ER due to poor access to primary care.
  - Community members expressed confusion and concern about pending health care reform.

Children’s Health

- Malignant Neoplasms (cancer) is the leading cause of death in children age 1-14, followed by accidents as the second leading cause of death.
- Other leading health issues of concern for children include obesity and asthma.
- Community Perceptions:
  - The community reported a growing need for mental and behavioral health services for children, yet very little services are available.
County Health Rankings

The County Health Rankings rank the health of nearly every county in the nation and show that much of what affects health occurs outside of the doctor’s office. Published by the University of Wisconsin Population Health Institute and the Robert Wood Johnson Foundation, the Rankings help counties understand what influences how healthy residents are and how long they will live. The Rankings confirm the critical role that factors such as education, jobs, income, and environment play in influencing health. The Rankings look at a variety of measures that affect health such as the rate of people dying before age 75, high school graduation rates, access to healthier foods, air pollution levels, income, and rates of smoking, obesity and teen births. The Rankings, based on the latest data publicly available for each county, are unique in their ability to measure the overall health of each county in all 50 states on the multiple factors that influence health.

- County Health Rankings and Roadmaps, www.countyhealthranking.org
Based on the County Health Rankings, Anderson County fares well compared to other parts of the state of South Carolina. It ranks 15th out of 46 counties among the health outcomes ratings and 11th among the health factors ratings. Anderson County has improved over the past 2 years in its “health outcomes ranking”, but has dropped slightly in its health factors ranking.

Obesity and Related Health Habits

Only 35% of the adult population in Anderson County lives at a healthy weight, or, only 1 out of every 3 persons. Additionally, out of the 65% individuals who are overweight and obese, half of those are obese. So while 1 in every 3 individuals lives at a healthy weight, 1 in 3 is overweight and 1 in 3 is obese. While Anderson’s overweight and obesity rate is better than many places in the state, it has steadily increased over the past 30 years. In 2011, CDC data indicated that South Carolina ranks as the 8th worst state in the United States in terms of obesity.

About 29% of South Carolina’s children are overweight and obese. Obesity and overweight conditions in SC children has been growing at an alarming rate.

Health habits such as exercise and nutrition are major factors determining weight. One in 4 adults in Anderson County is sedentary and 85% do not eat the recommended 5 servings of fruit and vegetables in a day.

Just as alarming, 43% of middle school students in SC watch 3 or more hours of TV on a school day, replacing outdoor or other active or mentally stimulating activity.

Alcohol Use Among Adolescents

SC Kids Count reported that in 2002, approximately 34% of high school students reported using alcohol in the past month. Anderson ranked 9th in the state (with a ranking of 1 being least % of high school students using alcohol). No updated data on adolescent alcohol use, specific to Anderson County, was available.
Teen Pregnancy Rates

Teen pregnancy rates have been showing a 10-year decline locally, state-wide and nationally. While Anderson County has seen a 10 year decline, rates are still higher in Anderson County than compared to the state and nation.

Health Environment

Anderson County offers an environment that supports and encourages healthy living.

Air Quality
The annual number of days with daily 8-hour maximum ozone concentration over the National Ambient Air Quality Standard in Anderson County was 9 days in 2005 and 2010, compared to 3.1 on average in South Carolina. However in 2011 and 2012 only 1 ozone day was reported each year.

Access to Healthy Food
Seventy-five percent of the county has access to healthy foods through outlets such as grocery stores, produce stands and farmers markets, compared to 65% in South Carolina. This is calculated by taking the percentage of zip codes in the county or state with a grocery store, produce stand or farmers market.

Access to Recreation
The availability of recreational facilities can influence individuals’ and communities’ choices to engage in physical activity. Proximity to places with recreational opportunities is associated with higher physical activity levels, which in turn is associated with lower rates of adverse health outcomes associated with poor diet, lack of physical activity, and obesity.

Anderson County ranks 9th in the state for access to recreation facilities, with a recreation rate of 11 recreational facilities per 100,000 population. Other counties in the state range from a rate of 0 to 13.

Health Risk Factors

Health, well-being and quality of life are affected by a variety of genetic, environmental, and behavioral risk factors. Many risk factors are related and interdependent of each other. For several of the risk factors that are most commonly associated with poor health, disability and premature death, Anderson County typically fares better than the rest of the state, but is below the national average as well as the Healthy People 2020 Goal.

Sources: Health Indicators Warehouse, American Diabetes Association, CDC, SC DHEC Biostatistics, SC DHEC ORS data, Healthy People 2020
One exception to this general trend is the prevalence of diabetes. Anderson has higher rates of diabetes than the state and the nation. In South Carolina, an additional 1.3% of the population has been told that they have pre-diabetes or borderline diabetes (BRFSS, 2010), a condition which can often lead to full-blown diabetes without proper treatment.

While Anderson County is ranked better than the state average on several key health factors, it is in the bottom third of counties for diabetes (32 of 46 counties).

And while Anderson has improved on several key health risk factors in recent years, the prevalence of diabetes is actually increasing in Anderson County, as well as in the rest of DHEC Region I and in the state as a whole.

Health Outcomes – Mortality and Morbidity

Leading Causes of Death
The leading causes of death for Anderson County are similar to those of South Carolina and the US. Cancer and heart disease account for approximately half of all deaths at the county, state, and national level.

Cancer
Cancer is the leading cause of death in Anderson County. The most common types of cancer in Anderson are colorectal, breast, lung, cervical, and prostate. In 2010, the total cost of hospitalizations for cancer in Anderson County was almost $46 million.

Anderson has higher cancer incidence rates than many counties in SC.

*Cases per 100,000

Based on 2004-2008 data, these higher rates of cancer prompted the National Cancer Institute to give Anderson a “Priority 1” rating, the highest priority out of a 9-level system of prioritizing communities in need of cancer control efforts. This priority level indicated that the death rate was both above the state and national rate, and also that the rate is rising. When the data was updated to 2005-2009 statistics, it indicated that incidence rates and death rates from all cancers have dropped slightly in Anderson, prompting the National Cancer Institute to move Anderson from Priority 1 to Priority 4. (Priority 4 indicates that death rates are stable and no longer rising, but still above state and national rates.)

A recent drop in death rates from cancer prompted the National Cancer Institute to move Anderson from Priority 1 (above average rates and still rising) to Priority 4 (above average rate but no longer rising).
Incidence and death rates of cancer are indicating a downward trend in Anderson, but are still higher than state and national rates:

Source: National Cancer Institute, State Cancer Profiles

The National Cancer Institute also prioritizes types of cancer that are most in need of cancer control efforts for a given area. Lung cancer, in particular, was identified by the National Cancer Institute as the highest priority in Anderson, as death rates from lung cancer are higher than state and national averages, and still rising.
Heart Disease
Heart disease is the leading cause of death in most of the US, and the second leading cause of death in South Carolina and Anderson. Heart disease is more of a threat as individuals age, and it is the number one cause of death of individuals 65 and over in Anderson.

Anderson has a heart disease death rate* of 184.4 per 100,000, which is comparable to the rates in South Carolina and the United States (187.5 and 185.2 respectively). Strides have been made, with a trend of declining heart disease death rates in the region for the past 10 years.

</tr>
</tbody>
</table>

Stroke
Cerebrovascular disease, or stroke, is the third leading cause of the death in SC and 4th in the nation. While it does not cause as many deaths in Anderson County as heart disease or cancer, it can cause significant disability such as paralysis, speech impairment, and emotional/psychological problems. Lifestyle changes and, in some cases, medication can significantly decrease risk of stroke.

Anderson’s stroke mortality rate* is 50.5 per 100,000, similar to the state rate of 50.9 and higher than the national rate of 40.5. Similar to heart disease death rates, strides have been made with a trend of declining stroke death rates in the region for the past 10 years.

SC DHEC Bureau of Community Health and Chronic Disease Prevention, County Chronic Disease Fact Sheet, April 2012
Diabetes
As mentioned earlier in the Health Risk Factors section of this report, Anderson County has a higher incidence of diabetes than the rest of the state and the nation. In addition to having a higher prevalence in Anderson County, diabetes mortality is also higher in the county. The mortality rate for diabetes in Anderson (31.9 deaths per 100,000 in 2009) is also above the state mortality rate for diabetes at 24.8 deaths per 100,000.

Anderson County ranks #11 in diabetes mortality in the South Carolina, and it is the 7th leading cause of death in Anderson.

While diabetes mortality rates are dropping in the US and in SC, they are trending upward in Anderson County.

DHEC Bureau of Community Health and Chronic Disease Prevention, County Chronic Disease Fact Sheet, April 2012
People living with diabetes are at risk for many serious complications greatly impacting overall health and quality of life. Complications include serious eye problems, foot problems (sometimes severe enough to lead to lower extremity amputations), and major skin infections and disorders. Individuals with diabetes often have other health risk factors such as overweight and hypertension which together often compromise quality of life.

**Asthma**

The prevalence of asthma has increased nationally since the 1980s. Though deaths from asthma have been decreasing, asthma is a significant health burden. It is a leading cause of hospitalizations and ER visits nationwide. In Anderson County, nearly 15,000 adults or 10.6% of the population suffer from asthma. Asthma is the second most common chronic condition seen in emergency departments in Anderson County, and the 10th most common chronic condition seen during inpatient stays.

Children are disproportionately affected by asthma. The prevalence of asthma is highest in those under 18, and it is the most common chronic disease and a leading cause of disability in children. In Anderson County, asthma accounts for 35% of all ER visits and asthma/bronchitis is the leading cause of hospitalization of children up to 18 years old.

Overall Anderson County has lower rates of hospitalization and emergency department visits for asthma than other parts of the state.
There is a marked racial disparity for asthma hospitalizations and emergency room visits. The hospitalization rate for black children is three times the rate of white children in Anderson; ER rate is twice as high for black children in Anderson County.

### Infant Mortality

The Infant mortality rate in Anderson County in 2010 was 6.7 per 1000 live births. This is better than the state rate of 7.4, and better than the national rate of 7.0. There is a great deal of disparity on infant mortality depending on race of the mother. Black and other non-white mothers have much higher rates of infant mortality than white mothers.

**Infant Mortality Rates in SC by Race and Percent Change from 2009 to 2010**

<table>
<thead>
<tr>
<th>Year</th>
<th>Total</th>
<th>White</th>
<th>Black &amp; Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>2009</td>
<td>7.1</td>
<td>5.2</td>
<td>10.5</td>
</tr>
<tr>
<td>2010</td>
<td>7.4</td>
<td>5.5</td>
<td>10.9</td>
</tr>
</tbody>
</table>

| Percent Change | 4.2% | 5.8% | 3.8% |

South Carolina’s infant mortality rate for Hispanic mothers was lower than the state rate and lower than the rate for white mothers, at 4.8 per 1000 live births.

Anderson County has a similar disparity in infant mortality rates:

**Infant Mortality Rates in ANDERSON by Race**

<table>
<thead>
<tr>
<th>Year</th>
<th>Total</th>
<th>White</th>
<th>Black and Other</th>
</tr>
</thead>
<tbody>
<tr>
<td>2010</td>
<td>6.7</td>
<td>5.7</td>
<td>10.3</td>
</tr>
<tr>

<td>13.5</td>
</tr>
<tr>
<td>2005-2007</td>
<td>7.4</td>
<td>4.8</td>
<td>17.7</td>
</tr>
</tbody>
</table>
Infant mortality rates in SC have trended down slowly for the past 20 years with the exception of an increase from 2009 to 2010. The disparity between white and non-white mothers has remained consistent.

**Leading Causes of Death for Children**

The leading cause of death for children up to age 1 year is disorders related to short gestation. The leading causes of death for children ages 1-14 are malignant neoplasms and accidents. Anderson has a higher rate of deaths from childhood cancer than the state, and a lower rate of death from accidents than the state.

For the 0-17 population Anderson County has a higher death rate from injury than the state, 35.2 per 10,000 for Anderson County compared to 21.7 per 10,000 for the state. For non-fatal injuries, Anderson County has a rate of 928.6 per 10,000 for ages 0-17, which is lower than the state rate of 978.4 per 10,000. Motor vehicle accidents are the leading cause of injury death for children 0-17. (SC DHEC Division of Injury and Violence Prevention, 2009)

Health Services – Preventive Clinical and Access

Due to the lower-income status of the county, Anderson County is designated as a low-income Health Provider Shortage Area (HPSA). In addition, certain areas of the county have been designated as Medically Underserved Areas/Populations (MUA/P). Zip codes 29626, 29627, 29684, 29689 and a cluster near the city encompass medically underserved areas.

Medically Underserved Areas by Zip Code

MUA/P is a federal designation and takes into account:

- Percentage of Population Below Poverty Level
- Percentage of Population Age 65 and Over
- Infant Mortality Rate
- Ratio of Primary Care Physicians Per 1,000
Clinical Preventive Services

Screenings
Anderson County screening rates for some of the most widely recommended screenings are better than the state and national rates. Anderson County residents are more likely to be receiving the regular cholesterol checks, colorectal screenings and mammograms.

Vaccines/Immunizations
Anderson County residents are more likely to have had the recommended flu and pneumococcal vaccines than other South Carolina residents. For childhood immunizations the percentage of children treated in public health clinics who had not received the recommended vaccines up to age 2 dropped from 28.2% in 1993 to 17.3% in 2003, the year that data for the county is available. Statewide birth registry indicates that 88.1% of all 2 year-olds were fully immunized in 2003. Healthy People 2020 goal is for 80% of children 19-35 months to have received all recommended vaccines.

Health Care Access

Percent with no insurance coverage in SC, by county

According to US Census Bureau data, 14.9% of Anderson’s population do not have any form of health insurance. This is better than the state rate of 17.5% and the national rate of 15.5%. However it does not meet the Healthy People 2020 goal of 100% of the population covered by some form of insurance.
Primary Care

Primary Care Physician Rate
Primary care physician rate is lower in Anderson than other parts of the state and country, but fewer people report delaying care due to cost.

Usual Primary Care Provider
Individuals who have identified a usual primary care provider are more likely to get routine medical screenings. Though county level data is not available for people who have a usual primary care provider, data indicates that people in the South are less likely than other regions of the country to have a usual primary care provider.

Emergency Room Usage
Emergency Departments are increasingly being used for primary care not only by individuals who do not have insurance, but by those with insurance (either through employment or through Medicaid and Medicare) who have difficulty getting an appointment with a regular primary care provider. In Anderson County, the number of ER visits has increased by approximately 40% from 2004 to 2011.

Physician offices are concentrated in the zip code 29621, with most of the offices in the center of the county.

Source: Health Indicators Warehouse, DHEC Biostatistics, CDC, Healthy People 2020, American Community Survey (ACS)
Qualitative data was gathered by conducting a series of community focus groups. Seven focus groups were completed inclusive of 74 participants. These groups included:

* Public Health Officials
* Health Care Providers
* Seniors
* Human Resource Professionals and Employer Group
* Other Health and Human Service Providers
* Community Neighborhood Group
* Hispanic Group

Topics discussed with the focus groups included:

1. General Health of the Community
   • General sense of health, wellness, lifestyle, environment, etc.
2. Health Conditions
   • Biggest concerns – illness, death
   • Perceived health trends
3. Access and Quality
   • Where people go for care, access
   • Gaps in service, barriers
   • Perceived quality of care

In addition, the United Way (UW) of Anderson County conducted a series of focus groups in April – May of 2012 to assess general perceptions of community issues and community need. Records and findings of these focus groups were also utilized to inform this CHNA. The UW focus groups included 7 community groups in a variety of geographic locations throughout the county and included over 80 participants. The focus groups were conducted by Shannon Owen of United Way and SE Consulting, Inc., who also assisted with focus groups for the CHNA effort. Records of these focus groups are on file with the United Way of Anderson County and are available upon request.

Additional information regarding community leaders and individuals representative of community residents is included in the Appendix in the Community Leaders and Representatives Involved section, page 52 of this report.
### Anderson County

#### Health Conditions
- Obesity/overweight
- Diabetes
- Hypertension
- Congestive heart failure
- Mental health issues
- Substance abuse/mental health
- Cancer

#### Children’s Health
- Diabetes
- Overweight/obesity
- Developmental delays
- Mental health/behavioral issues
- Asthma and allergies
- Inactivity/screen-time/poor diet
- Poor parenting/single parents/grandparent homes
- Lack of inexpensive recreational activities (no more playing outside all day)

#### Barriers to Healthy Lifestyle
- Low SES – healthy foods and recreational opportunities are not affordable/accessible for some segments of population
- No immediate benefit, many in “survival mode”
- Lack of time for exercising, preparing healthy meals
- Education on healthy lifestyle
- Age/disability
- Access to safe parks, trails, recreation facilities

#### Other/Misc.
- Widespread misuse of ER - hard to get apt esp. if no insurance or Medicaid only; waiting until health condition is serious; no after hours care; no medical home;
- Knowledge about healthy lifestyle does not equal healthy behaviors; healthy choices need to be easy and accessible
- Concern/confusion about healthcare reform

### Basic Health Care - What Organizations?

#### Gaps in Services
- Mental health- adult and children
- Available health care for Medicaid patients
- Dental health- esp. adults
- After hours/weekend clinic

Also mentioned (but not as frequently):
- Special needs children-recreation and services
- Preventive cancer screenings for some populations
- Transition special needs kids to adult
- Disabled/elderly
- In home care for seniors

1. General lack of services / hard to access services for those with Medicaid
2. Mental health services
3. Dental care-adults

#### Barriers to Healthcare
- Many doctors not taking Medicaid
- Lack of medical home
- Lack of insurance
- Inability to “work the system”/self-advocate
- Transportation- esp. elderly/Medicaid
- Lack of afterhours/weekend services (shiftwork)
- Cost/Low SES- lack of insurance or Medicaid only, out of pocket cost, access to healthy food and recreation
- Hispanic population -Access to care is limited (esp. OB and pediatrics); perception that providers will not work with them; poor translation/communication problems with Hispanic population

#### Proposed Solutions
- Better coordination of service providers- increasing awareness of what’s available, appropriate referrals; better communication with physicians/hospital and public health professions
- Improve communication between doctors/patients/caregivers/other providers
- Partner with schools on obesity; possibly preventive care at schools
- Wellness programs at work- utilize AnMed professionals; community education
- Partner with pharmaceutical companies on medical supplies (esp. diabetes)
- Education on cooking, other topics
- Consider social media opportunities
- Condition management model (Michelin)
- Require or incentivize healthy lifestyle habits- pay people to lose weight or exercise
- Consider establishment of FQHC status or other health center that accepts Medicaid patients?
- Use of culturally sensitive health coaches in target communities; use of positive peer pressure
- Support Eat Smart Move More
- Support growth of walking trails, bike paths
- Health care educators in primary care offices
- Support opening of Urgent care center
Overall/Major Focus Group Themes (common across all groups):

- Obesity and related diseases (diabetes, heart and vascular diseases, hypertension) is considered the major health issue for adults and children.

- “Insurance does not equal access.” Lack of access to primary care is a major issue:

  **POOR ACCESS TO PRIMARY / PREVENTIVE CARE**
  - inability to get timely appointments esp. w/Medicaid
  - high out of pocket cost (patient’s part/copay/medicines)
  - lack of afterhours or weekend care
  - lack of mental health services
  - lack of medical home

- Lack of mental/behavioral health services, particularly for children, is a major issue.

- Most people know what they need to do to be healthier, but have a hard time doing it. Most are open to incentives, even mandates, to move them toward healthier lifestyles.
Identified Priority Health Needs & Related Health Assets

To select priorities and related strategies, the following criteria were considered:

- Data and community feedback indicated the issue as an important community need
- AnMed Health has the capacity to impact the issue
- Addressing a selected issue holds the potential to affect other key health conditions, therefore creating a multiplying effect
- Strategies selected align with and support AnMed Health’s mission and strategic direction
- Strategies selected take in consideration current assets in both the community and within AnMed Health

In considering the above, the following priorities were selected:

1. **Obesity**
   Over 65% of the population is either overweight or obese. That number has continued to grow over the past several decades. Childhood obesity is growing at an alarming rate. Addressing obesity has the potential to positively affect leading health issues in the community – heart disease (which is the County’s 2nd leading cause of death), stroke, hypertension, and diabetes.

2. **Access to Primary Health Care**
   Anderson County is designated as a low-income Health Provider Shortage Area (HPSA) for medical care. Hospital data shows ER usage rates have increased by approximately 40% from 2004 – 2011. Focus groups reported access to primary care as a major concern. The most frequently reported issues with access to care were: finding a provider that takes Medicaid, getting an appointment in a timely manner, high out-of-pocket costs, and lack of a medical home.

3. **Access to Behavioral and Mental Health Services**
   Anderson County is designated as a low-income Health Provider Shortage Area (HPSA) for mental health care. The community focus groups repeatedly reported that behavioral and mental health services are a growing need, yet very little mental and behavioral health services are available. There was particular concern regarding lack of mental and behavioral health services for children.

4. **Cancer**
   Cancer is the leading cause of death in both adults and children (age 0-14) in Anderson County. Anderson still has a higher cancer death rate and higher cancer incidence rate than SC or US. Lung and colorectal cancers are of particular concern. Recent data has, however, shown improvement in Anderson. The National Cancer Institute data set from 2004-2008 reported Anderson County as a
priority level 1. A new release was issued July 2012 indicating that incidence rates and death rates from all cancers have dropped slightly in Anderson, prompting the National Cancer Institute to move Anderson from Priority 1 to Priority 4 (priority level 1 indicated that the death rate was both above the state and national rate, and also that the rate is rising. Priority 4 indicates that death rates are stable and no longer rising, but still above state and national rates.)

5. Asthma in Children
The prevalence of asthma has increased nationally since the 1980s. Asthma is the second most common chronic condition seen in emergency departments in Anderson, and the 10th most common chronic condition seen during inpatient stays. Children are disproportionately affected by asthma. The prevalence of asthma is highest in those under 18, and it is the most common chronic disease and a leading cause of disability in children.

6. Accident Prevention for Children
Accidents is the second (after malignant neoplasms) leading cause of death in children under age 18. For the 0-17 population Anderson County has a higher death rate from injury than the state, 35.2 per 10,000 for Anderson compared to 21.7 per 10,000 for the state. For non-fatal injuries, Anderson County has a rate of 928.6 per 10,000 for ages 0-17, which is lower than the state rate of 978.4 per 10,000. Motor vehicle accidents are the leading cause of injury death for children 0-17.

Strategic initiatives to address each of these identified needs have been developed and are included in the AnMed Health Medical Center & AnMed Health Women’s and Children’s Hospital Community Health Needs Assessment – Implementation Strategy document. This will be reported annually to the IRS on Form 990.

Community and AnMed Health assets related to the identified priority health needs have been identified and are documented in the asset framework on the following pages. These assets are also referenced alongside the strategic initiatives in the AnMed Health Medical Center & AnMed Health Women’s and Children’s Hospital Community Health Needs Assessment – Implementation Strategy document. Strategic initiatives selected take in consideration these current assets.
ANDESON COUNTY
COMMUNITY HEALTH NEEDS ASSESSMENT

- Secondary Market Research
  (Quantitative Analysis of Existing Statistical & Health Status Data)

- Primary Market Research
  (Qualitative Analysis of Feedback From Targeted Focus Groups; Reveals Community Perceptions)

Health & Wellness Priority Issues
- Obesity
- Access to Primary Care
- Access to Mental Health Services
- Cancer
- Asthma (children)
- Accident Prevention (children)

Programs & Services Initiated & Led By AnMed Health
- Medical Center & ED
- Women’s & Children’s Hospital

AnMed Health has created a map to better health.

When it comes to your family's health, you need the advice and care of experts. That's when you turn to the professionals at AnMed Health.

Thanks to our comprehensive network of physicians' offices and patient care sites, you can be confident that convenient, high-quality care will always be there when you need it.

AnMed Health at a glance:
- SC's largest independent not-for-profit health system
- Designated a Bariatric Surgery Center of Excellence by the American Society of Metabolic and Bariatric Surgery
- Level II Nursery
- Only Level II Trauma Center in SC
- Received Accreditation with Commendation from the Commission on Cancer of the American College of Surgeons

*Public health officials represent the broad health interests of the community, especially Anderson County residents served by the public health department. The public health officials listed above reviewed the secondary data and concurred with the assessment of the key priorities. Curriculum vitae of these individuals are available upon request.
Community Leaders and Representatives Involved

A variety of community leaders and representatives were involved and provided input into the CHNA. Community leaders and those very knowledgeable of the public’s health needs include individuals working for the local health department. Data was gathered from the state and local health departments. A meeting was held with public health staff to gather their input and perspective on health needs and preliminary results of the CHNA were presented to the public health staff to gather their reaction to the report and additional feedback needed to solidify the report. Public health officials involved included:

Kandi Fredere, PhD, MHA, MCHES
Interim Health Director

Mary Stackhouse, RN
Newborn Home Visiting Nurse Supervisor

Shanika McCray, MPH, RN

Misty Lee, BS, MCHES
Health Educator

Amy Mattison, RN
Home Health Supervisor

Curriculum vitae of these individuals are available upon request.

Representatives of community residents, inclusive of underserved population were directly involved in the CHNA through the focus group efforts and one-on-one discussions. Some of these representatives also provided assistance to the effort by helping to invite and gather community individuals to participate in the focus groups. Key community representatives include:

Bea Thompson
Representing the Westside Heights Community --
Ms. Thompson is a well-respected individual in the community. She hosted a focus group in her community at the local community center.

Carol Loyd
Representing the needs of underserved individuals --
Ms. Loyd works for the United Way as the Health Community Impact Associate. She is responsible for staffing the United Way’s Health Vision Council and is the local liaison for the 2-1-1 health and human services information and referral call line. Ms. Loyd participated in one of the focus groups and provided reports regarding 2-1-1 calls that provided information on the most common types of assistance local residents needed and were requesting through the 2-1-1 center.

Betty Stallings
Representing Seniors and Belton (an outlying, rural community in the County) --
Ms. Stallings is a well-known and respected individual in the Belton area, which is an outlying rural area of Anderson County. She helped coordinate, invite and host a group of Seniors to participate in a community conversation related to community needs in the local community center in the town of Belton.
Adela Mendoza and Wilson Narvaez
Hispanic/Latino representatives --
Adela Mendoza is the Executive Director of the Hispanic Alliance in the Upstate of South Carolina. Ms. Mendoza provided information regarding the needs related specifically to the Latino population. In addition, Ms. Mendoza assisted in coordinating, conducting and translating for a community focus group with Spanish speaking, Latino individuals.

Mr. Narvaez, a local Hispanic restaurant owner in the outlying, rural town of Williamston, assisted by hosting a Hispanic/Latino focus group at his restaurant. He also assisting by inviting individuals to participate in the group.

Additional groups were represented throughout the focus group process as listed below.

**Agencies and Community Groups Participating/Represented in Community Feedback Process**
- Alzheimers Association
- Anderson Area YMCA
- AnMed Health Providers and Professionals
- Anderson University
- Belton Community
- Cross Country Home Services
- Doclink
- Free Clinic
- Hispanic Community Representatives
- Hospice House
- Housing Authority
- Meals on Wheels
- Michelin
- ReWigo
- Safekids
- Senior Action
- Senior Solutions
- Westside Community Center
- Walgreens Distribution Center
- Westside Community Center
- United Way Anderson
